

MASK REPROCESSING

SteriRight's hospital-grade N95 respirator and level 3 surgical mask sanitization service:

- reduces procurement pressure
- reduces costs
- reduces single-use waste

Authorization for this hospital-grade process was issued by Health Canada through an interim order and validated by labs from the University of Guelph and McMaster University.

The process also complies with Ontario Health's recommendations for Optimizing the Supply of Personal Protective Equipment during the COVID-19 Pandemic which states:

"In the context of depleted supplies of PPE during a pandemic, using validated sterilization and disinfection methods to decontaminate PPE for future use should be considered in your crisis plans in settings where it can be safely done."

HOW IT WORKS

At our facility in Hamilton, Ontario or at your location with our mobile unit, a SteriRight technician will inspect your masks, mark and tag them for tracking, then run them through the decontamination process. SteriRight's state-of-the-art technology was developed and manufactured in Canada. It has been proven to kill 99.99% of a surrogate for COVID-19 and is the same technology that is used in hospital networks across the country. The process uniquely uses 3 proven modalities for disinfection:

1. Ozone
2. Proprietary Hydrogen Peroxide
3. UV-C Light

When sanitization is complete, a separate technician retrieves the clean masks, inspects them once again, labels and safely repackages them to be returned to the original user or stored at our facility.

ELECTROSTATIC DISINFECTION

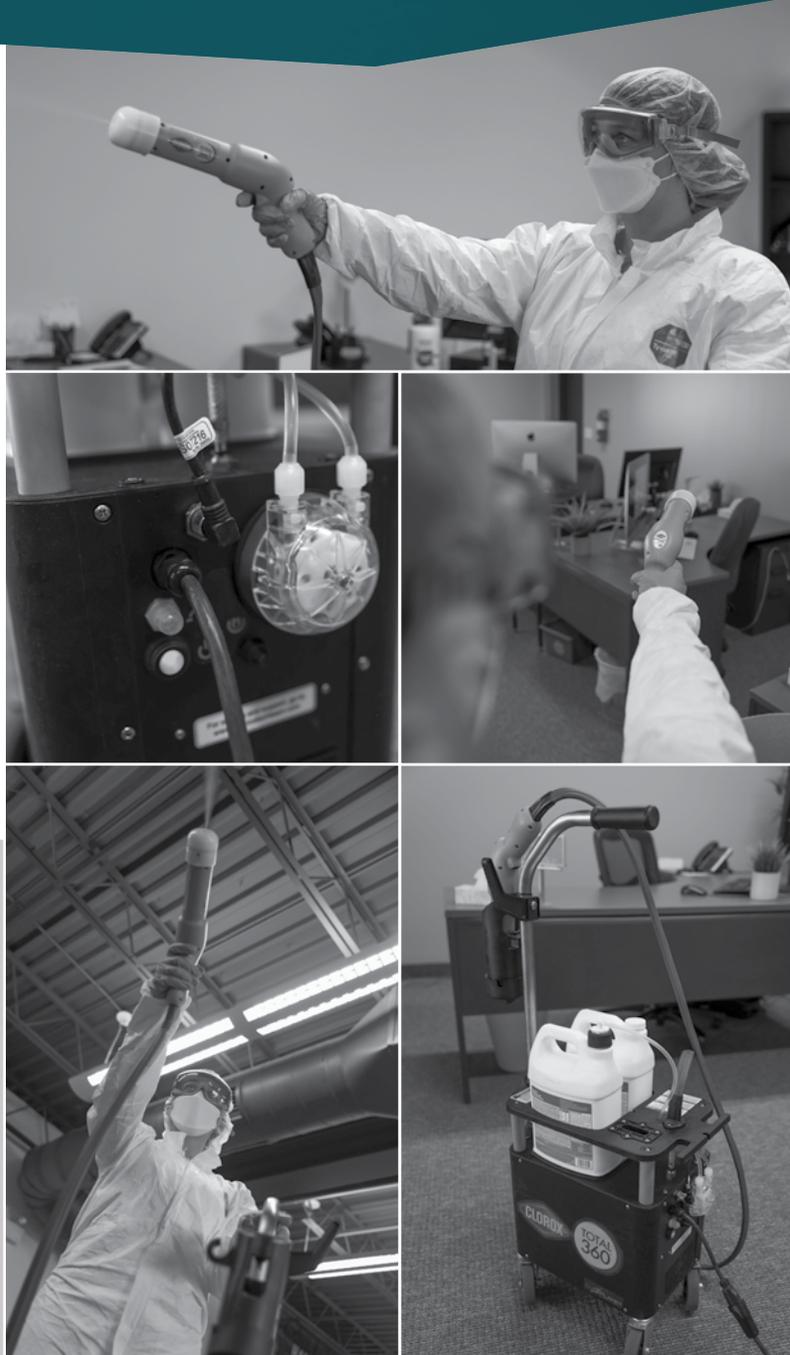

SteriRight trained technicians offer a turn-key solution seven days a week to meet your organization's sanitization needs. Electrostatic Disinfection provides a layer of safety and security that both employees and customers can appreciate.

Pricing is based on the size of the area requiring treatment. Our electrostatic disinfection service is available in two convenient ways:

1. One-time treatment - Reduce business interruption following an incident so you can get back to work quickly and safely.
2. Subscription - As a preventative measure, regular service adds a layer of security to your operations and value to your clientele.

HOW IT WORKS

Electrostatic disinfection provides a charge to a disinfectant solution so that it electromagnetically sticks to a surface, providing 360-degree coverage preventing, COVID-19, flu, coronavirus and other outbreaks in your facility. The charged particles are attracted to surfaces and uniformly coat them, holding their charge for 2-3 seconds after application to spread further than traditional trigger sprayers and get into hard-to-reach places.
